I, the undersigned official veterinarian, hereby certify that:

- Australia is classified as "Negligible BSE Risk" by the OIE.
- The boneless meat/bone in meat/offal specified above originate from animals which:
  - Were born and reared in Australia;
  - Are identified by systems throughout all stages of the food production chain to allow traceability to the animal's property of origin.
  - Which have never received any feed and concentrates containing ingredients of mammalian origin excluding milk proteins.
  - Were approved for export to Israel following an ante- and post-mortem veterinary inspection as provided by law and regulations of the exporting country, and are at the time of loading fit for human consumption.
  - After freezing, has been maintained at a temperature below -18°C for frozen product at the time of loading.
- The slaughterhouse has food safety programs in place including HACCP, SSOP and SPS which are verified by the competent authority.
- The slaughter house has standard operation procedure for animal welfare and animal protection at slaughter in place which are verified by the competent authority.
- The said product:
  - Based on the Australian National Residue survey is confirmed not to have residues of pesticides, drugs and chemicals above the maximum residue limits prescribed internationally by the Codex Alimentarius.
  - The said products conform to the "Requirements and procedures for the approval of slaughterhouses, meat boning and cooling facilities for the export of meat and offal to Israel".
